1 Introduction

The desire for in-demand seamless, reliable and user friendly event ticketing platforms has never been greater. Whether it's for concerts, games, sports or community gatherings, consumers expect instant access to tickets with organizers needing robust tools to manage sales, attendance and logistics for any event. Our project, EventMaster, is a ticketing platform designed to simplify event experiences, providing users a seamless way to manage, purchase, and access tickets all in one place. An innovative platform that's inspired by an industry that's been monopolized by a few. We're built with flexibility, transparency and scalability at its core.

Our software is intended for stakeholders in event management, software development and digital commerce who are seeking a solution that simplifies ticket distribution while enhancing the user experience. This system aims to solve common pain points such as long queues, hidden fees, limited payment options and lack of real time updates, offering streamlined interface, secure transaction, affordability and dynamic event tracking.

1.1 Purpose

To outline the key issues users face with ticket purchasing platforms and provide practical solutions for resolving them.

1.2 Scope

This project involves the design and development of a web-based ticketing system that’s tailored for event organizers and attendees. We will offer a streamlined interface for browsing events, purchasing tickets and managing event logistics. We will also provide organizers with tools for tracking sales, analyzing attendance and ensuring secure transactions.

1.2.1 In Scope

User registration and authentication

Event creation and management

Ticket browsing, selection and purchase

Admin dashboard for analytics and reporting

Basic Consumer support interface

1.2.2 Out of Scope

Native Mobile app

Integration with payment gateways

Multi-language support

Fraud detection

QR Code Generation

Integration with external marketing platforms

1.3 Definitions, Acronyms, and Abbreviations

<This subsection provides the definitions of all terms, acronyms, and abbreviations required to properly interpret the Project Vision document. This information may be provided by reference to the project's Glossary>

This section explains all of the terms and abbreviations that are being used in this document, for those who are unfamiliar with them. Not everybody who reads this document will understand all of the terms, so this section is helpful.

Term	Explanation
UI	User interface - Visual elements which users interact with
UX	User Experience - Overall experience and satisfaction a user has with the system
QR code	Quick Response code
MVP	Most Viable Product
API	Application Programming Interface
SSL	Secure Sockets Layer
DBMS	Database management system

1.4 References

<This subsection provides a complete list of all documents referenced elsewhere in the Project Vision. Identify each document by title, report number if applicable, date, and publishing organization. Specify the sources from which the references can be obtained. This information may be provided by reference to an appendix or to another document>

Reference File Name	Version	Description
Project Vision		The full description and information for the project.
High Level Requirements		References members and references key documents
Minutes of Meeting		Team meeting tracking sheet.
Personas		Character profiles of possible users.

Reference File Name	Version	Description
User Stories		Information and use cases for personas.

This section also contains links to all other places that were referred to in this document. These may include:

- *Web sites*
- *URLs or network locations*
- *Research done for similar products*

Name	Link
TicketMaster	The Home Team Tickets, 2025-2026 Concert Tour Dates | Ticketmaster CA
StubHub	Buy sports, concert and theater tickets on StubHub!
Vivid Seats	Buy and Sell Tickets: Concerts, Sports & Theater | Vivid Seats

2 Positioning

2.1 Business Opportunity

As times become tough for many, the live events industry is booming, with many ticketing platforms continuing to frustrate both users and organizers with outdated interfaces, limited integration, and some security vulnerabilities. Newer generations expect fast, intuitive access to tickets with organizers needing flexible tools to manage events, track sales and engage audiences at a low cost. However, existing solutions fall short, creating friction, lost revenue, poor user experience and even holding a monopoly over the industry.

2.2 Problem Statement

< Provide a statement summarizing the problem being solved by this project. The following format may be used>

The Problem of	Complex user experience
affects	Ticket buyers, organizers and admins
the impact of which is	Lowers user engagement and event turn out
a successful solution would be	Simplify UI and navigation

Table 1 Problem Statement

The Problem of	Low transparency on pricing and fees.
affects	All ticket buyers
the impact of which is	Reduced ticket sales, loss of user trust and lawsuits.
a successful solution would be	To provide a platform that is completely transparent about pricing and service fees.

Table 2 Problem Statement

The Problem of	Little to no integration
affects	Organizers, ticket buyers and admin
the impact of which is	Limited payment options and manual workflow
a successful solution would be	Integrate different payment options and analytic services

Table 3 Problem Statement

The Problem of	Security
affects	Organizers, ticket buyers and admin
the impact of which is	Loss of trust and data being stolen
a successful solution would be	Use encryption and user authentication

Table 4 Problem Statement

2.3 Product Position Statement

< A product position statement communicates the intent of the application and the importance of the project to all concerned personnel >

For	Event organizers and attendees
Who	Need a reliable, intuitive, and secure way to manage and purchase event tickets
The <product name>	web -based ticketing platform
That	Simplifies event management and ticket purchasing while ensuring data security and integration with payment services
Unlike	Traditional platforms like ticket master that may be complex or rigid (Should remove Ticketmaster)
Our product	Offers a customizable, scalable and user centric solution built for modern event needs

Table 2 Product Position Statement

2.4 SWOT Analysis

<Reference: https://www.businessballs.com/strategy-innovation/swot-analysis/)

Strengths	**Weaknesses**
Integration	Time limit
Transparency	High competition
User Experience	Budget
Opportunities	**Threats**
Large Market	Market saturation
Low fees	Losing a team member
Modern Tech Stack	Security Risks

3 Stakeholder and User Descriptions

< This section provides a profile of the stakeholders and users involved in the project, and the key problems that they perceive to be addressed by the proposed solution. It does not describe their specific requests or requirements as these are captured in a separate stakeholder requests artifact. Instead, it provides the background and justification for why the requirements are needed>

3.1 Stakeholder Summary

< There are a number of stakeholders with an interest in the development and not all of them are end users. Describe and list the project stakeholders>

Stakeholder Name	Represents	Role
Team	Developers	Developers' role to implement and design EventMaster to help sustain livelihood
Event Organizers	Business clients	They'll use the platform to list events and manage ticket sales
Attendees	End users	Purchase tickets and interact with the platform
Payment gateway	Third-party service	Enables secure financial transactions
Hosting provider	Infrastructure	Supports deployment and uptime of the platform

Table 3 Stakeholder Summary

3.2 User Summary

< Present a summary list of all identified users of the system >

User Name	Description	Responsibilities	Stakeholder
Event organizer	Individual or organization hosting events	Create events, set ticket prices, monitor sales, and manage attendee data	Team(Developers and client proxy)
attendee	Person purchasing tickets	Browse events, purchase tickets, access digital passes	team(via user testing/feedback)
Admin	Platform administrator	Monitor system health, manage user accounts, and generate reports	team

Table 4 User Summary

4 Stakeholder Requirements

< Categorize and list the requirements from the perspective of the business stakeholder and potential system users >

ID	Requirement	Stakeholder
0	Ability for organizers to create, edit and publish events	Event organizer
1	Secure payment processing with integration to stripe or paypal	Event organizer attendee
2	User-friendly interface for browsing and purchasing tickets	Attendee
3	QR code generation for digital ticket validation	Event organizers
4	Admin dashboard with analytics on ticket sales and user activity	Platform Admin
5	Authentication system for user login and account management	All Users
6	Responsive design for desktop and mobile browsers(Mobile not in current focus)	Attendee
7	Basic customer support interface(FAQ, Contact form)	Event Organizers and Attendee
8	Role based access control for Organizers and admins	Platform Admin
9	Data encryption and secure storage for user information	Event Organizer and admin.

Table 5 Stakeholder Requirements

5 System Features

< List and briefly describe the system features. Features are the high-level capabilities of the system that are necessary to deliver benefits to the users. Avoid design. Keep feature descriptions at a general level. Focus on capabilities needed and why (not how) they should be implemented >

ID	Feature	Stakeholder Requirement ID
0	Event Creation and management	0
1	Secure payment integration with stripe/paypal	1

ID	Feature	Stakeholder Requirement ID
2	Ticket browsing and purchasing flow with responsive UI	2, 6
3	QR code generation for digital ticket validation	3
4	Admin dashboard with real-time analytics and reporting	4
5	User authentication and account management	5
6	Role based access control for organizers and admins	8
7	Basic customer support interface (FAQ and Contact form)	7
8	Data encryption and secure storage protocols	9

Table 6 System Features

6 Assumptions

1. *We assume that most if not all event organizers have access to a Windows or MacOS operating system and an updated web browser in order to use our EvenMaster system.*
2. *We assume that our users and administrators have access to a stable internet connection which is sustainable enough to use the system. (Over 95% of Canadian homes have access to sustainable internet speeds) - https://crtc.gc.ca/eng/internet/internet.htm*
3. *We assume that our users have capable access to digital payment methods, which include credit/debit cards, PayPal, ApplePay, etc. Physical cash transactions are not typical for online ticket sales. (Over 79% of Canadian consumer transactions were made digitally in 2023) - https://www.payments.ca/*
4. *We assume that our users and administrators expect and trust our system to use industry-standard data protection (SSL, encryption, CPPA compliance)*

7 Constraints

1. *Budget constraints - The initial development budget is little to none, so advanced features like fraud detection, QR code generation, marketing integrations will be restricted. These advanced features will be implemented in the future if the budget allows itself to.*

2. *Time constraints - We only have one semester to get a functioning system up and running. Due to this, some features may be prioritized over others in order to meet our deadlines.*
3. *Resource constraints - Whilst only having 4 group members, some advanced features may be sacrificed due to human resources.*
4. *Regulatory constraints - We must follow in accordance with the CPPA laws while managing and working with real user data. This may hinder some of our design flow and add extra overhead with implementation of features.*
5. *Third-Party constraints - We must follow and use third-party payment processors (PayPal, ApplePay) in order to process real time transactions.*
